

## **Paint and Composite Fabrication Technician**

The Technician should be experienced with body work, priming, sanding, blocking, skimming, wet lay-up, and masking. The Tech should also be proficient in the use of body shop tools (DA's, sanding blocks, grinders, etc.) and materials (body filler, two-part resins and epoxies, epoxy primers and urethane primers). A Strong aptitude in aircraft or Auto body paint techniques as well as a background in composite fabrication and repair techniques is preferred.

### **Job Duties:**

- Fabrication of composite aircraft parts
- Prep molds and forms
- Cut materials following templates, guides or specific dimensions and sequences
- Lay-up composites
- Vacuum bag parts for oven cure
- Surface prep and painting
- Maintain records as required

### **Job Requirements:**

- Background in composite fabrication and repair techniques
- Previous paint and bodywork experience desirable
- Proficient in the use of body shop tools
- Good basic math skills (ratios & calculator use)
- Ability to read a tape measure
- Good problem solving skills and the ability to work well with a team.
- Able to follow written and verbal instructions and fill out paperwork as needed
- Experience with fiberglass and composites preferred
